The Asia Pacific Software Engineering Conference (APSEC) is the leading international conference on software engineering and technology in the Asia-Pacific region. APSEC 2014 aims to bring together researchers and practitioners from industry, academia, and government to advance the state of the art in software engineering and technology and to encourage wider collaboration between academics and industries.

Topics of interest include, but are not limited to:

- Cloud and grid software systems
- Domain specific engineering
- Embedded real-time systems
- Empirical software engineering
- Formal methods
- Mobile and ubiquitous systems
- Productline software engineering
- Software engineering environments and tools
- Security, reliability and privacy
- Software architecture and design
- Software engineering methods
- Software maintenance and evolution
- Software process and standards
- Software project management
- Software requirements engineering
- Software versioning
- Software testing, verification and validation
- Web-based software engineering

Submission & Review

Paper submissions are rigorously reviewed and evaluated based on originality, technical quality, and relevance to software concepts and technologies. Best papers will be submitted for publication in a special section of Elsevier International Journal of Information and Software Technology (IST). All submissions must be in English. Submissions must not exceed 8 pages in length for regular track papers and 4 pages for industry and postgraduate symposium tracks, including figures and references.
